How to Start a New Project in Windsurf AI

1. **If you don't have any project open**
    Click the "Open folder" button. You need a new, completely empty folder somewhere on your computer. I recommend working on the D drive, if it exists. I don't recommend working on the Desktop.

    You can create a "parent" folder named "Windsurf", and inside it create a new folder for each project.

2. **If a previous project appears**
    Go to the main menu, to *File*. From there, you can either use "New Window" – which will take you to the case above – or you can choose "Open Folder".
